

DO NOW

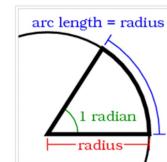

What is a radian?
What are coterminal angles?

Page 1

Trigonometry Review

Introduction to Radian Measure:

1. Draw a circle with the radius marked.
2. From the point where the radius meets the circumference of the circle, measure one radius length along the circumference of the circle moving counterclockwise and mark this point.
3. Draw a line from this mark back to the center of the circle.
4. The angle so formed is considered to be of size one in trigonometry; this is measuring in "radians".

Page 2

Radian and Degree Measure:

$$\text{Full rotation} = 360^\circ$$

$$\text{If } r=1$$

$$C = 2\pi r$$

$$C = 2\pi r = 360^\circ = 2(3.14) = 6.28\dots$$

$$\pi = 180^\circ$$

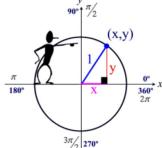

Quadrantal Angles: $0, \frac{\pi}{2}, \pi, \frac{3\pi}{2}, 2\pi$

Change radians to degrees:

$$\pi = 180^\circ$$

$$\frac{\pi}{180} = 1 = \frac{180}{\pi}$$

- multiply by $\frac{180}{\pi}$

Page 3

Examples:

Convert from radians to degrees:

$$1. \frac{\pi}{4} \cdot \frac{180}{\pi} = 45^\circ$$

$$\boxed{45^\circ}$$

$$2. \frac{7\pi}{6} \cdot \frac{180}{\pi} = 30^\circ$$

$$\boxed{210^\circ}$$

$$3. \frac{3\pi}{2} \cdot \frac{180}{\pi} = 90^\circ$$

$$\boxed{270^\circ}$$

Convert from degrees to radians:

$$4. 35^\circ$$

$$5. 60^\circ$$

$$6. 135^\circ$$

$$7. 35^\circ \cdot \frac{\pi}{180} = \frac{7\pi}{36}$$

$$\boxed{\frac{7\pi}{36}}$$

$$60^\circ \cdot \frac{\pi}{180} = \frac{\pi}{3}$$

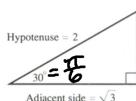

$$\boxed{\frac{\pi}{3}}$$

$$135^\circ \cdot \frac{\pi}{180} = \frac{3\pi}{4}$$

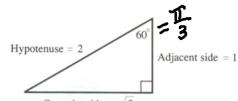

$$\boxed{\frac{3\pi}{4}}$$

Page 4

30 - 60 - 90 Triangle:

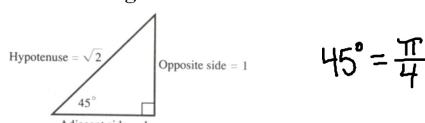

Hypotenuse = 2
Opposite side = 1
Adjacent side = $\sqrt{3}$

Hypotenuse = 2
Opposite side = $\sqrt{3}$
Adjacent side = 1

$$\begin{aligned} \sin \frac{\pi}{6} &= \frac{1}{2} & \sin \frac{\pi}{3} &= \frac{\sqrt{3}}{2} \\ \cos \frac{\pi}{6} &= \frac{\sqrt{3}}{2} & \cos \frac{\pi}{3} &= \frac{1}{2} \\ \tan \frac{\pi}{6} &= \frac{1}{\sqrt{3}} = \frac{\sqrt{3}}{3} & \tan \frac{\pi}{3} &= \sqrt{3} \\ \cot \frac{\pi}{6} &= \sqrt{3} & \cot \frac{\pi}{3} &= \frac{1}{\sqrt{3}} = \frac{\sqrt{3}}{3} \\ \sec \frac{\pi}{6} &= \frac{2}{\sqrt{3}} = \frac{2\sqrt{3}}{3} & \sec \frac{\pi}{3} &= 2 \\ \csc \frac{\pi}{6} &= 2 & \csc \frac{\pi}{3} &= \frac{2}{\sqrt{3}} = \frac{2\sqrt{3}}{3} \end{aligned}$$

45 - 45 - 90 Triangle:

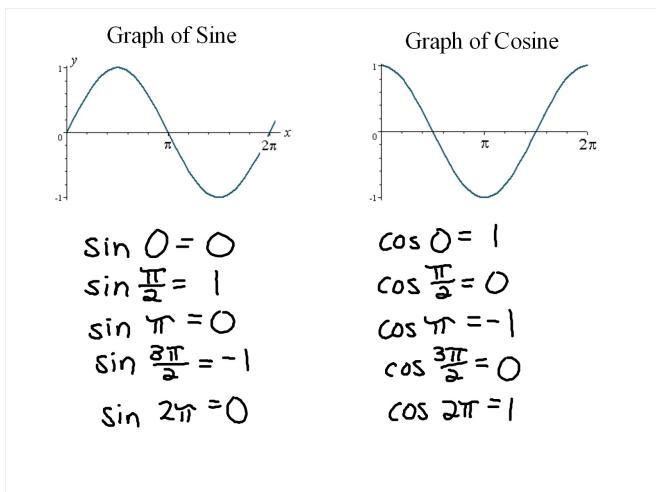

Hypotenuse = $\sqrt{2}$
Opposite side = 1
Adjacent side = 1

$$\begin{aligned} \sin \frac{\pi}{4} &= \frac{1}{\sqrt{2}} = \frac{\sqrt{2}}{2} \\ \cos \frac{\pi}{4} &= \frac{1}{\sqrt{2}} = \frac{\sqrt{2}}{2} \\ \tan \frac{\pi}{4} &= 1 \\ \cot \frac{\pi}{4} &= 1 \\ \sec \frac{\pi}{4} &= \sqrt{2} \\ \csc \frac{\pi}{4} &= \sqrt{2} \end{aligned}$$

Page 5

Page 6

Page 7

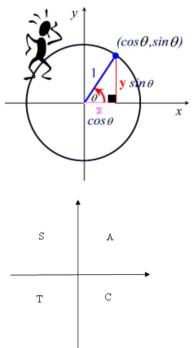

Using the unit circle to find trig values:

* Imagine a right \triangle that follows the unit circle.
hypotenuse = 1

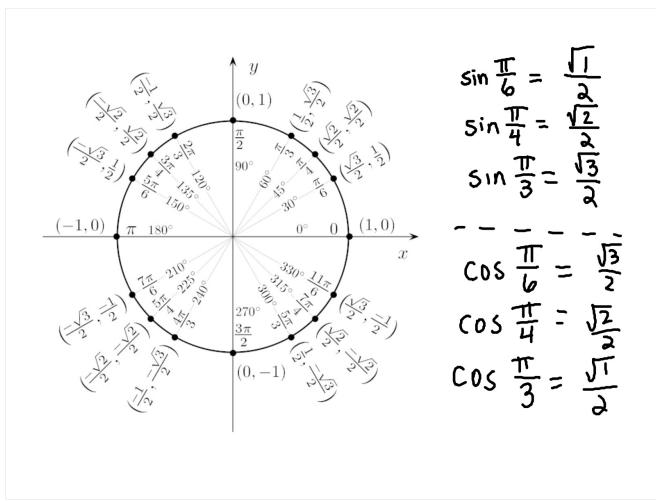

So opposite = y-value ($\sin \theta$)
adjacent = x-value ($\cos \theta$)

$(\cos \theta, \sin \theta)$

* Always work from origin

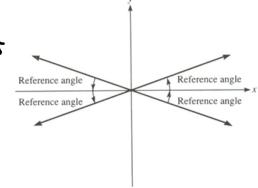

Page 8

Page 9

Reference Angles:

* Angle formed with the terminal side and x-axis

**Coterminal Angles:**

Angles whose terminal sides are the same

Ex: $3\pi \rightarrow 5\pi \rightarrow 7\pi$

* Subtract multiples of 2π

Page 10

Examples: Find the reference angle.

7. $\frac{5\pi}{6}$
 $\boxed{\frac{\pi}{6}}$

8. $\frac{8\pi}{3}$
 $\frac{8\pi}{3} - 2\pi$
 $\frac{8\pi}{3} - \frac{6\pi}{3}$
 $\frac{2\pi}{3}$
 $\boxed{\frac{\pi}{3}}$

9. $\frac{9\pi}{4}$
 $\frac{9\pi}{4} - \frac{8\pi}{4}$
 $\boxed{\frac{\pi}{4}}$

Find the angle measure to match the given quadrant and reference angle.

10. III; $\frac{\pi}{4}$
 $\pi + \frac{\pi}{4}$
 $\boxed{\frac{5\pi}{4}}$

11. IV; $\frac{\pi}{6}$
 $2\pi - \frac{\pi}{6}$
 $\boxed{\frac{11\pi}{6}}$

12. II; $\frac{\pi}{3}$
 $\pi - \frac{\pi}{3}$
 $\boxed{\frac{2\pi}{3}}$

Find:

13. $\cos \frac{2\pi}{3}$
ref: $\frac{\pi}{3}$
Q: II
 $\boxed{-\frac{1}{2}}$

14. $\sin \frac{11\pi}{4} - \frac{8\pi}{4} = \frac{3\pi}{4}$
Q: II
ref: $\frac{\pi}{4}$
 $\boxed{\frac{\sqrt{2}}{2}}$

15. $\tan -\frac{5\pi}{6}$
Q: III
ref: $\frac{\pi}{6}$
 $\boxed{\frac{\sqrt{3}}{3}}$

16. $\csc 5\pi$
CSC undefined

Page 11

Page 12

Find x in radians. Use the domain $[0, 2\pi]$.

17. $\sin x = -\frac{1}{2}$
 $\arcsin x = -\frac{\pi}{6}$

ref: $\frac{\pi}{6}$

Q: III, IV

$\boxed{\frac{7\pi}{6}, \frac{11\pi}{6}}$

19. $\cos x = -\frac{\sqrt{2}}{2}$

ref: $\frac{\pi}{4}$

Q: II, III

$\boxed{\frac{3\pi}{4}, \frac{5\pi}{4}}$

18. $\tan x = \frac{1}{\sqrt{3}} = \frac{\sqrt{3}}{3}$

Q: I, III

ref: $\frac{\pi}{6}$

$\boxed{\frac{\pi}{6}, \frac{7\pi}{6}}$

20. $\sec x = \sqrt{2}$

ref: $\frac{\pi}{4}$

Q: I, III

$\boxed{\frac{\pi}{4}, \frac{7\pi}{4}}$

Degrees	Radians	Sine	Cosine	Tangent	Cotangent	Secant	Cosecant
0	0	0	1	0	und	1	und
30	$\frac{\pi}{6}$	$\frac{1}{2}$	$\frac{\sqrt{3}}{2}$	$\frac{\sqrt{3}}{3}$	$\sqrt{3}$	$\frac{2\sqrt{3}}{3}$	2
